Headline:

A Flashlight Truly Designed to Go Anywhere

Body Copy:

Meet the world's most versatile flashlight. Powerful. Rugged. And designed to go with you on all your adventures. Whether your diving a wreck, setting up camp, or just walking the dog – the GoBe is your ultimate waterproof flashlight.

A Dive Light Like No Other

At 800 lumens on high, the GoBe is bright enough to be used as a primary dive light. Yet, it's small enough to slip into a BCD or jacket pocket, so it's always on hand whenever you need it. The GoBe has five operational modes: low, medium, high, SOS mode and an extended life mode. Light your dives on high power for up to 90 minutes, or stay safe in an emergency with a max run time of 36 hours.

Light & Motion's Fast Charge technology enables you to go from drained to fully charged in 3 hours. It's USB rechargeable, and since it has a fully sealed battery compartment, there is no need to worry about flooding. Rated to a depth of 120 meters, it's truly waterproof.

A Configuration for Every Adventure

Go hands-free. The GoBe works with all of Light & Motion's mounting accessories. Put it on your helmet for cave diving, your handlebars for ripping up the trails or on your camera housing for an underwater photography light.

With quick-change light heads, easily convert your GoBe to match your adventure. The GoBe 800 comes standard with a 12-degree spotlight. Convert it to a floodlight with the wide-angle light head – suitable for underwater video or lighting up basecamp. Or use it with the red light head for a focus light for your camera systems or to preserve your vision while night diving.
